

Rain Water Flows Through Easily

Quick and Easy Installation

Completely Fills Gutter Opening

Nothing can clog gutters with **Rain Flow™** in place. Leaves, needles, seeds and debris dry up and blow away in the wind.

Quick And Easy To Install

Rain Flow™ installs quickly in existing 5" and 6" K gutters without tools. No screws, nails, brackets or caulk. 3 ft. lengths are easily cut with scissors for miter joints and end caps.

No Damaged Shingles.

Invisible From The Ground

Rain Flow™ can't be seen from ground level. Unlike metal covers or screens **Rain Flow™** does not require color matching to shingles, gutters or trim and doesn't change the appearance of the home.

Rain Flow™ works with *any* roof from flat to 16/12 pitch.

Rain Flow
TOTAL GUTTER PROTECTION™

Self Cleaning

Rain Flow™ washes clean with every rainfall. It is tough, nonabsorbent and dries quickly. Shingle grit and other small debris pass through easily.

Permanent All Weather Protection

Rain Flow's patented material is not affected by changing weather. From hot summer sun to winter snow and freezing ice, **Rain Flow™** protects gutters from clogging year-round.

Rain Flow Total Gutter Protection Frequently Asked Questions

What is Rain Flow?

Rain Flow is a gutter protection system that prevents leaves, pine needles, twigs and other debris from collecting in and clogging rain gutters. Water flows through quickly and easily. Rain Flow is environmentally friendly, being made of all natural fibers and coated with a UV stable premium acrylic latex.

How does Rain Flow work?

Because leaves, seeds, pine needles, pinecones and other debris are suspended on top of Rain Flow, gutters continue to work as intended. Air circulation above, below, and around debris allow it to dry up quickly and blow away in the wind.

Will anything clog Rain Flow material?

Rain Flow will not clog. Because of its design, every rainfall washes it clean and gutters remain free flowing.

Will shingle grit affect Rain Flow?

Shingle grit will not affect Rain Flow. It simply passes through as if the gutters were empty.

Will pine needles affect Rain Flow?

Pine needles are suspended on top of Rain Flow and water flows right through them. Because of air circulation around the pine needles, they dry up quickly and blow away in the wind.

Will Rain Flow cause ice dams?

Rain Flow will not cause nor prevent ice dams. Ice dams are caused by temperature changes in the roof and are related to ventilation and insulation conditions in the attic space. However, Rain Flow will keep snow from collecting in the gutter allowing snow to melt and drain.

How long will Rain Flow last?

The material in Rain Flow is manufactured from all natural fibers coated with a UV stable premium latex. It will not rot, crush or become matted down. As such, Rain Flow carries a 20 year warranty.

OUR MISSION STATEMENT

To offer new and innovative
home improvement products
that benefit home owners
and contractors.
